Project Management & Consulting**

environment management plan

type: an environmental project

location: melbourne & regional victoria

services offered: environmental management,
environmental planning & project
management

Ainley Projects develops Environmental Management Plans (EMP), Environmental Improvement Plans (EIP) and Construction Environmental Management Plans (CEMP) for many clients working across many different sectors.

EMP's detail how a company or project team will ensure environmental compliance and best practice in the activities they undertake. The plans identify objectives, risks and opportunities, and are specific to client's needs and business activities. We have developed company EMP's for:

- Architects
- Construction Companies
- Retail Boat Sales
- Wholesale Distributors
- Engineers
- Quantity Surveyors

Projects based EIP's address environmental impacts and identify a process of continual improvement. Activities are documented and stakeholders consulted, and actions to manage environmental risks and compliance are identified. Monitoring and evaluation are incorporated into the plan. We have developed EIP's for:

- Boat ramp, marina and dry stack boat storage projects
- Dredging, land reclamation & other projects on Crown Land

A CEMP describes potential environmental impacts and how they will be managed during construction. We work closely with the builder to ensure CEMPs are practical and actions are achievable. We have developed CEMP's for:

- Residential dwellings and sporting pavilions
- Bridge, boat ramp and retaining wall construction

Ainley Projects can advise you on the best type of plan for your situation and will then work with you to ensure your plan is practical, realistic and achievable - and results in environmental improvements.
